Final project

Stage 6: Evaluation results and presentation of the final project

Objective: During this stage, you should plan the last corrections and improvements to your project, based on the evaluation results you received from stage 5, and present your project, justifying your design decisions.

Description

- Make a list of the problems pointed out by the heuristic evaluators and propose possible solutions or justify your design decisions (in case you do not agree with the evaluators). You can also include other problems (and respective solutions) that you have found in the meantime.
- Fix essential problems, starting with the severe problems.
- You will have to present a demo of your project. Available dates will be pointed out.

Project presentation and demonstration (mandatory)

Demo sessions will be arranged. In the demonstration session, you should:

- Explain the objectives of your application and the characteristics of the target users.
- Make a guided tour through your interface, using concrete examples from your scenarios.
- Let me try the interface
- Answer questions related to your design options and development process.

Bring your system ready to use.

Report

- Include the list of problems pointed out by the heuristic evaluators and your proposed solutions, as well as the justification of your design decisions (in case you do not agree with the evaluators). You can also include other problems (and respective solutions) that you have found in the meantime. Specify what problems you have fixed after the evaluation.
- Do not forget to update the project site, where the results from all stages should be available, including stage 5 reports (the one you received and the one you created).

Deadline: December 8

Demo (tentative dates): 11, 12, 16, 17, 18 December (to be arranged)
